

## How to Set up Parental Controls in Windows 10/11

Before you proceed – Make sure you are already logged into Windows with an account that you as a parent administer.

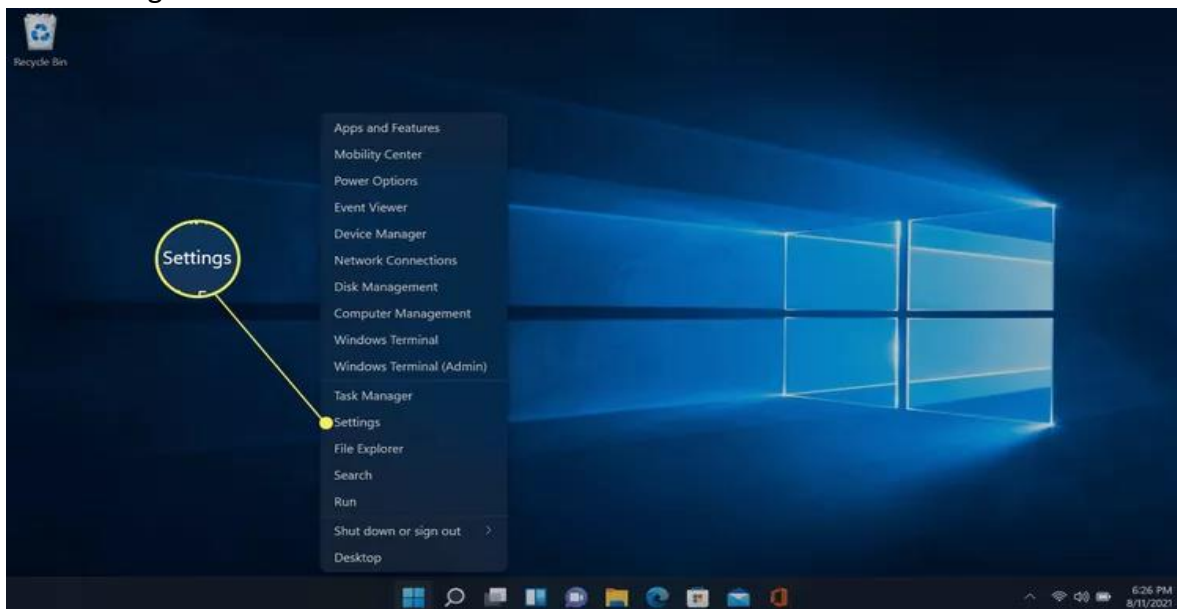

To set up parental controls in Windows 11, you and your child will both need to have Microsoft accounts. Yours will be a parent account, and theirs will be a child account that's tied to yours. As the parent account holder, you can turn on parental controls and view reports related to your child's activity.

Here's how to set up parental controls in Windows 10/11:

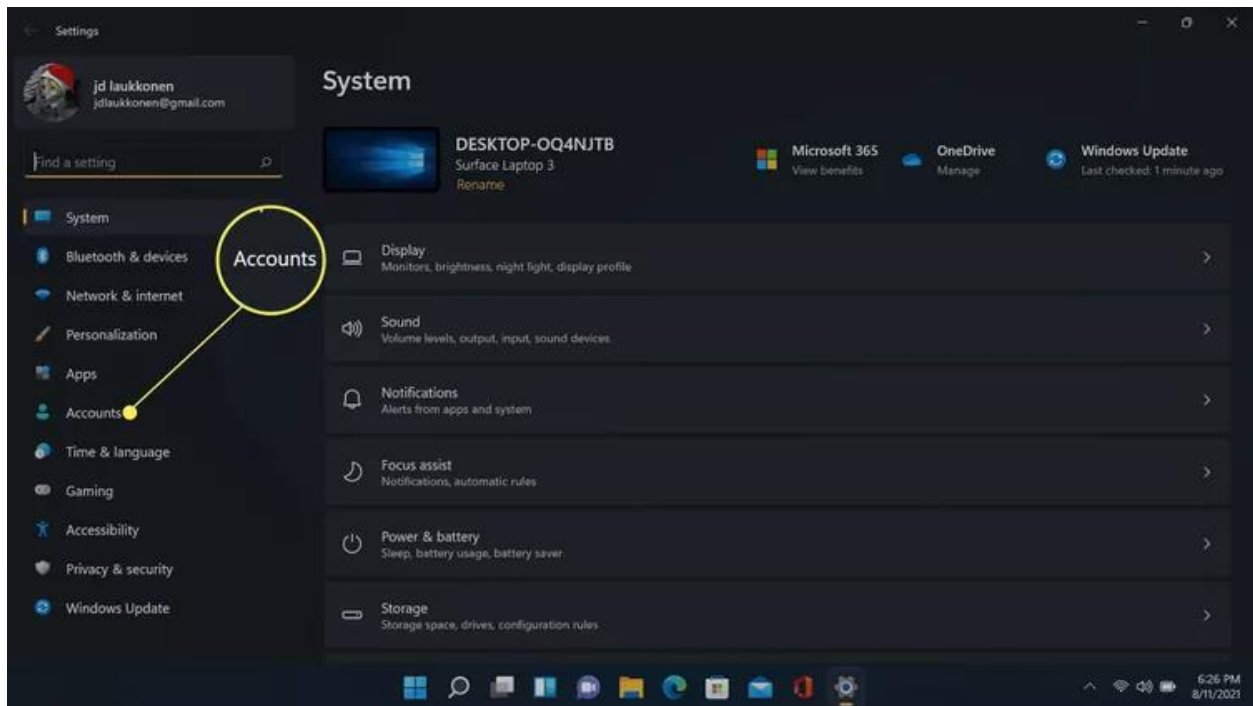

1. Right click the Windows icon on the taskbar.

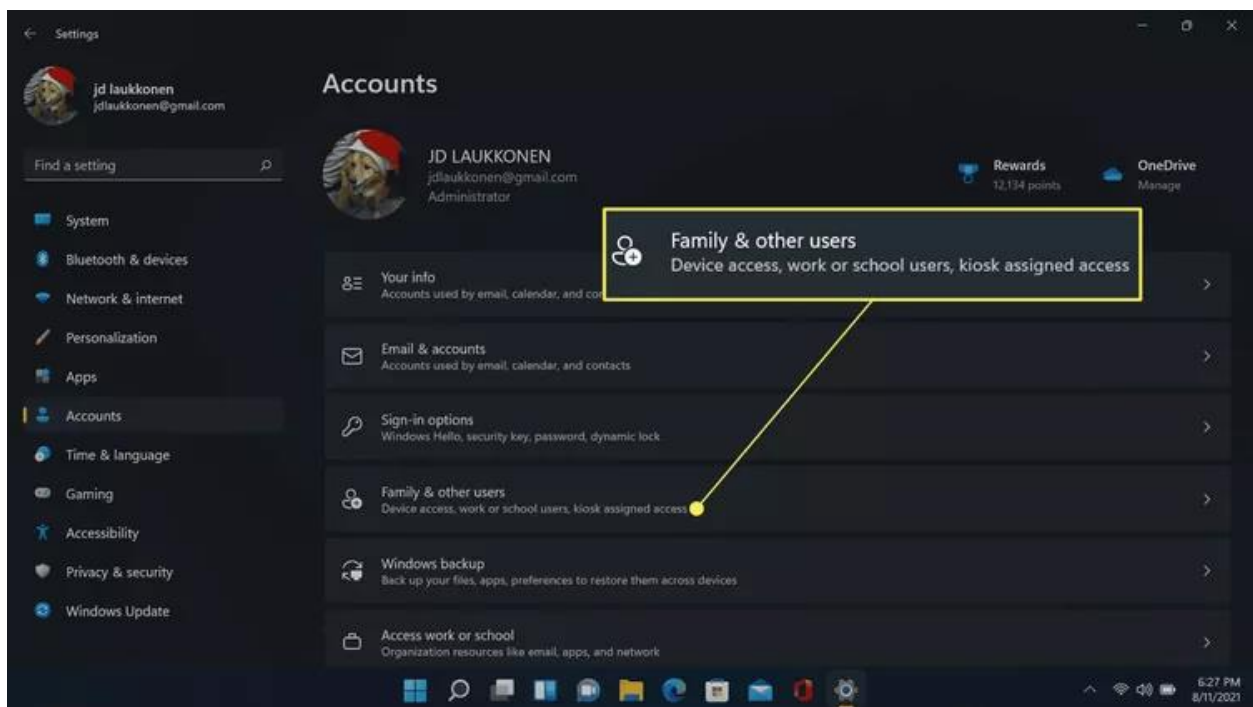

2. Click Settings.

3. Click Accounts.

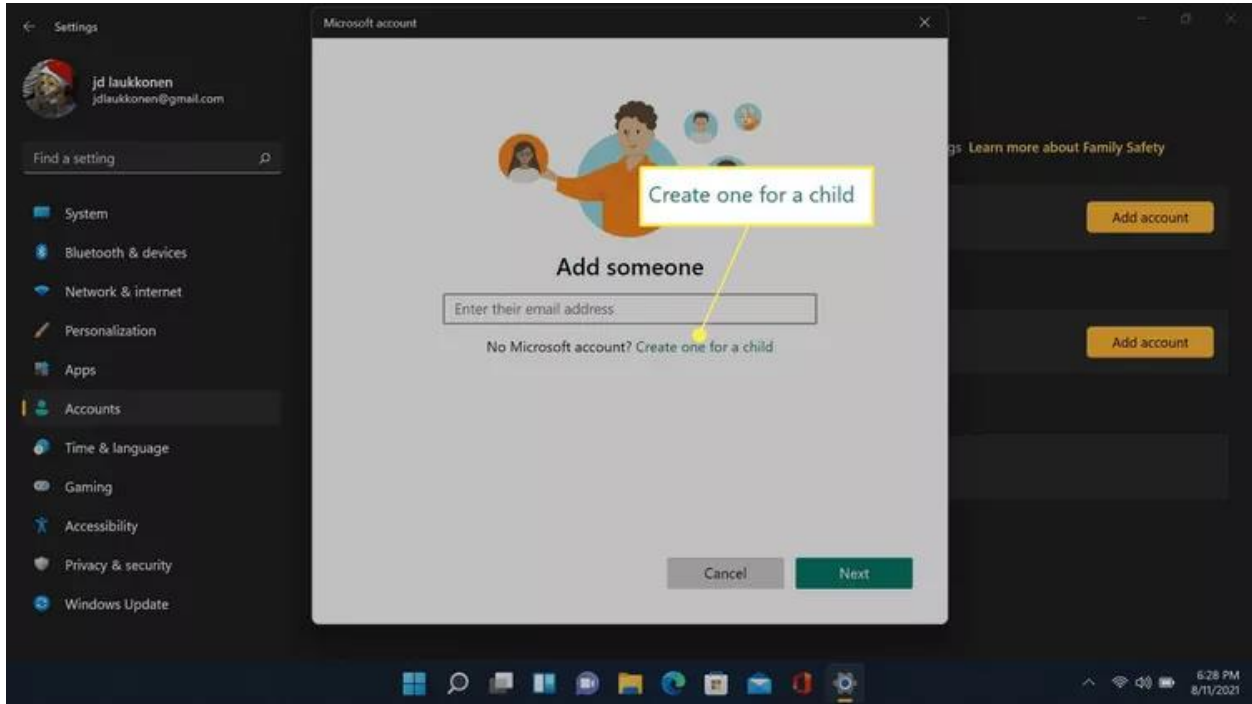

4. Click Family & other users.

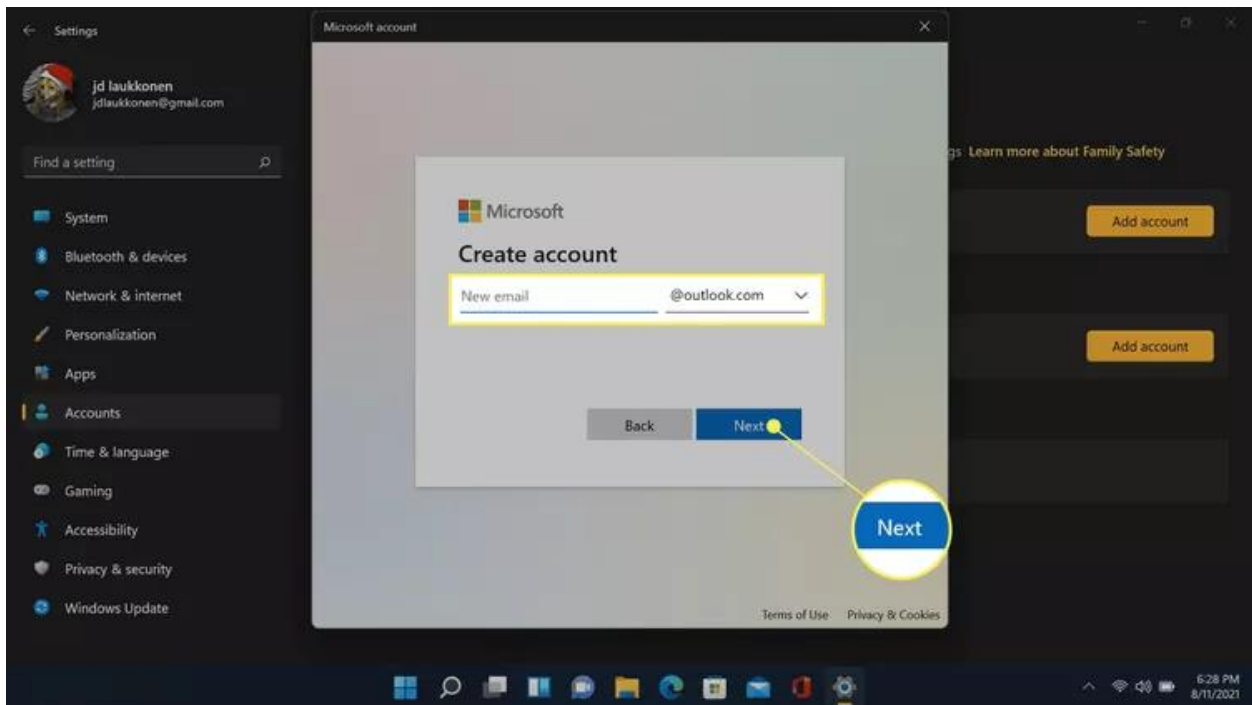

5. Click Add account.

6. Click Create one for a child.

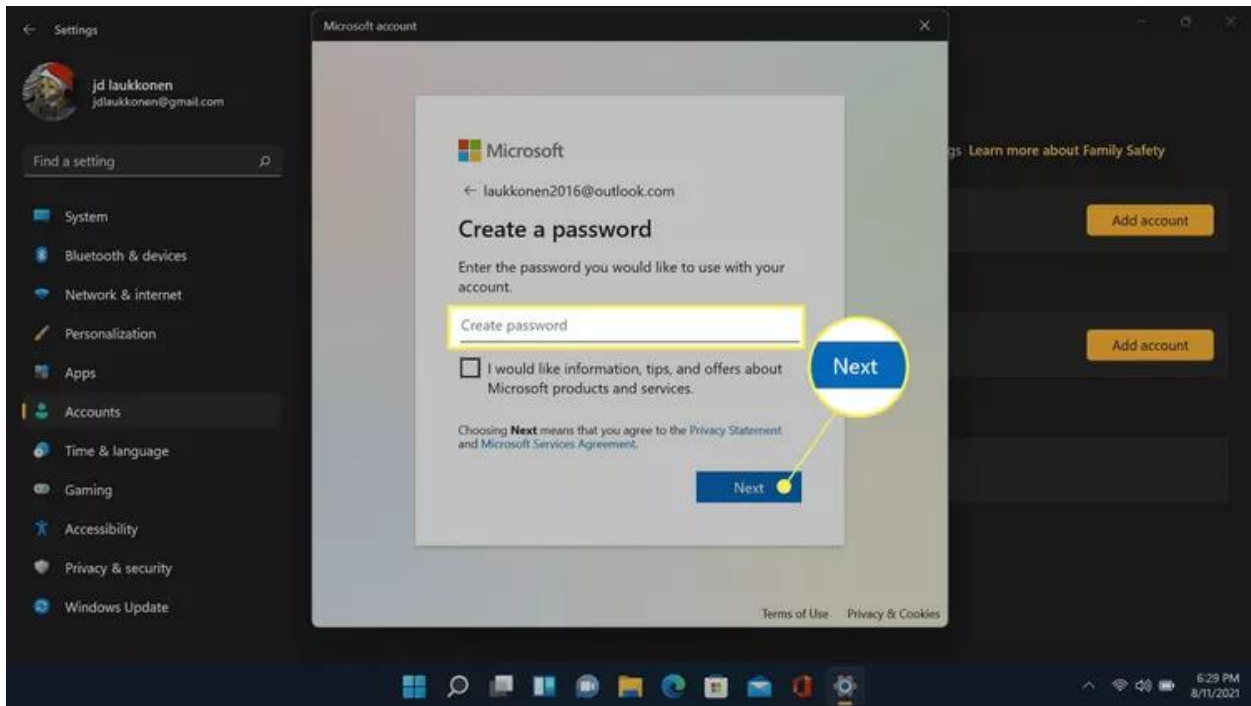

7. Enter an email address for your child, and click Next. (Don't worry, your child will not actually be able to access emails etc. This is just for an ID tag.)

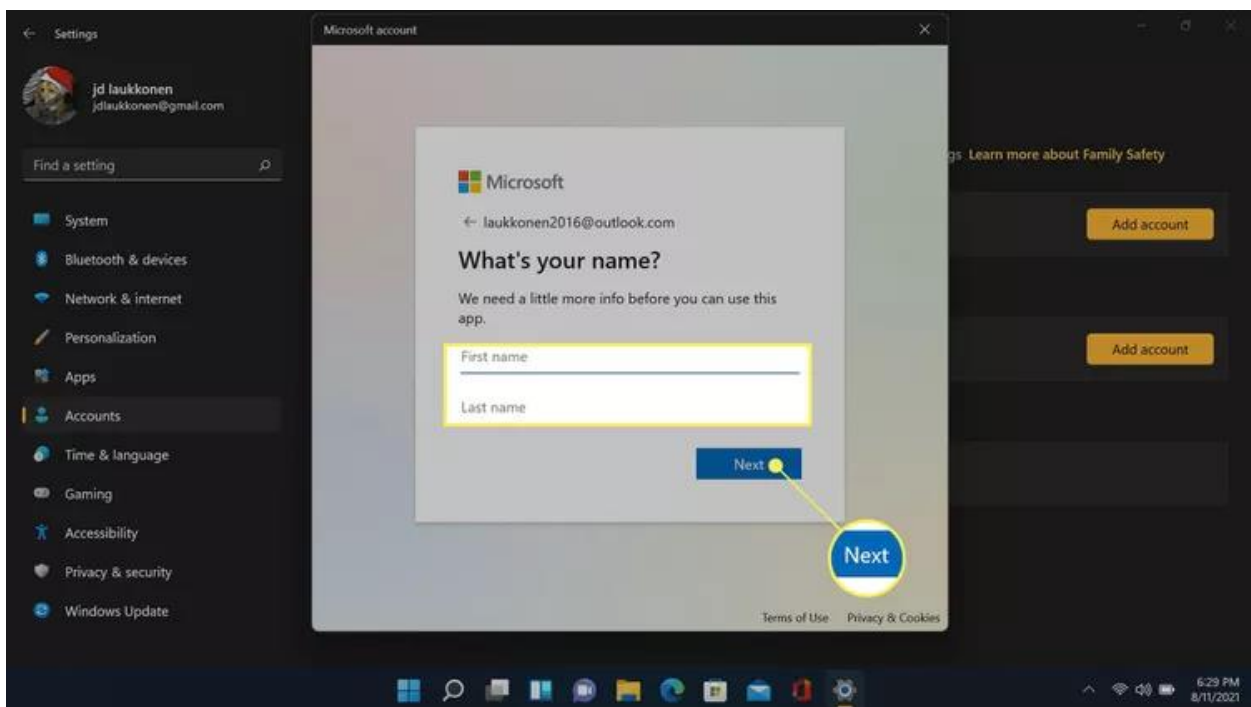

If you aren't already logged into your own Microsoft account, you will have to do so first. Parental controls are not available if you don't have a Microsoft account. You may need to set up a personal account to proceed.

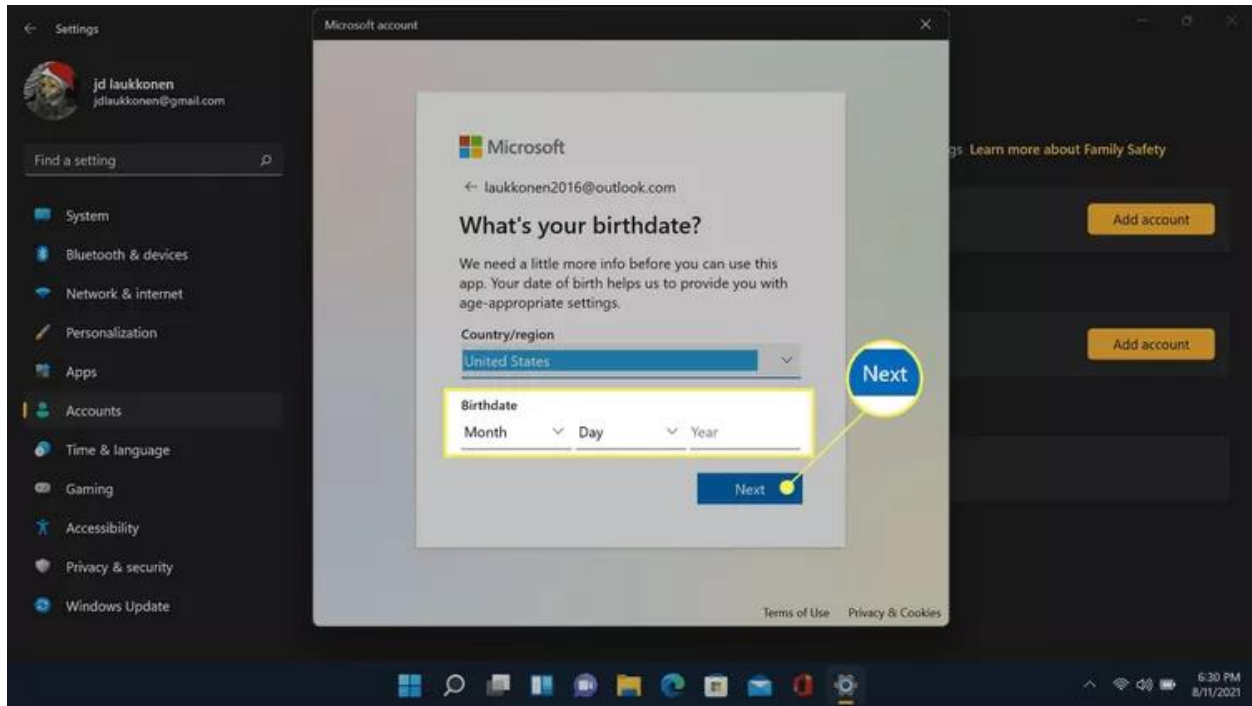

8. Enter a password, and click Next. (This is a password that your child will be allowed to know)

9. Enter a name, and click Next.

10. Enter a birthday, and click Next.

11. Windows 11 will use the birthday you enter to generate automatic restrictions based on age.
